

# The 90-Day Institutional Migration Roadmap

Structural Transformation from Legacy Silos to Unified Governance

## INTRODUCTION

### The Blueprint for Scalable Adoption

Legacy migrations fail because they lack a "Golden Standard." Nexus utilizes a phased-blueprinting approach that ensures the first campus creates a repeatable template for all subsequent locations.

DAYS 1-21

## PHASE 01

### Deep Discovery & Systems Mapping

#### Audit of Data Silos:

We identify and catalog every "shadow database" currently in use (Excel, legacy EHRs, paper logs).

#### SSO & Directory Sync:

Alignment with university IT to map SAML 2.0 or OAuth credentials. We define the auto-provisioning logic: User Attribute "Student\_Year\_4" = Permission Set "Senior\_Intern."

#### Infrastructure Stress Test:

Assessing campus bandwidth and hardware readiness for a 100% cloud-native environment.

#### Data Scrubbing:

Cleansing of legacy patient records to prevent "garbage-in, garbage-out" migration.

DAYS 22-50

**PHASE 02**

## The "Golden Campus" Configuration

### **Workflow Virtualization:**

We build your unique clinical hierarchy into the software. This includes custom intake forms, SOAP note templates, and specialty-specific coding (ICD-10/CPT).

### **The Geofence Anchor:**

Establishing the IP-range whitelists for each physical campus to ensure data sovereignty.

### **Alpha Testing:**

A "Super User" group of faculty and senior students stress-test the custom workflows in a sandbox environment.

DAYS 51-75

**PHASE 03**

## Faculty "Master Queue" Integration

### **The Signature Workflow:**

Training faculty on the Master Review Queue. This centralizes all student encounters, allowing for bulk review, 1-on-1 digital feedback, and final electronic signatures.

### **Admin Dashboard Training:**

Deans are trained on institutional reporting—tracking student hours, clinical competencies, and patient outcomes at scale.

DAYS 76-90

**PHASE 04**

## Full Deployment & Post-Live Hypercare

### **Final Data Cut-over:**

Migrating live patient records from legacy systems to Nexus.

### **Go-Live Support:**

On-site (or high-touch remote) "War Room" support for the first rotation cycle.

### **The Blueprint Handover:**

Documentation provided to IT for the 45-day rollout of subsequent campuses. environment.
